Errors
Missing alternative text

What It Means
Image alternative text is not present.

Why It Matters
Each image must have alternative text. Without alternative text, the content of an image will not be available to screen reader users or when the image is unavailable.

What To Do
Add an alt attribute to the image or, for svg elements, provide a <title> or ARIA label. The value should accurately and succinctly present the content and function of the image. If the content of the image is conveyed in the context or surroundings of the image, or if the image does not convey content or have a function, it should be given empty/null alternative text (alt="").

The Algorithm... in English
An image does not have an alt attribute.

Guidelines
• [1.1.1 Non-text Content \(Level A\)](#)

Contrast Errors
Very low contrast

What It Means
Very low contrast between text and background colors.

Why It Matters
Adequate contrast of text is necessary for all users, especially users with low vision.

What To Do
Increase the contrast between the foreground (text) color and the background color. Large text (larger than 18 point or 14 point bold) does not require as much contrast as smaller text.

The Algorithm... in English
Text is present that has a contrast ratio less than 4.5:1, or large text (larger than 18 point or 14 point bold) has a contrast ratio less than 3:1. WCAG requires that page elements have both foreground AND background colors defined (or inherited) that provide sufficient contrast. When text is presented over a background image, the text must have a background color defined (typically in CSS) that provides adequate text contrast when the background image is disabled or unavailable. WAVE does not identify contrast issues in text with CSS transparency, gradients, or filters. WCAG Level AAA requires a contrast ratio of at least 7:1 for normal text and 4.5:1 for large text.

Guidelines

- 1.4.3 Contrast (Minimum) (Level AA)

Structural Elements
Heading level 2

What It Means
A second level heading (<h2> element) is present.

Why It Matters
Headings facilitate page navigation for users of assistive technologies. They also provide semantic and visual meaning and structure to the document.

What To Do
Ensure that the text in question is truly a heading and that it is structured correctly in the page outline.

The Algorithm... in English
An <h2> element is present.

Guidelines

- [1.3.1 Info and Relationships \(Level A\)](#)
- [2.4.1 Bypass Blocks \(Level A\)](#)
- [2.4.6 Headings and Labels \(Level AA\)](#)

Reference

ARIA
ARIA alert or live region

What It Means
An ARIA alert role or live region is present.

Why It Matters
ARIA live regions and alerts can be used to dynamically inform screen reader users of content updates.

What To Do
Ensure the live region is properly tested and presents important, succinct content updates. A live region should not be used if focus is set to the updated page element.

The Algorithm... in English
A role="alert", role="alertdialog", or aria-live attribute is present.

Guidelines

- [3.3.1 Error Identification \(Level A\)](#)
- [4.1.3 Status Messages \(Level AA\)](#)
