Errors
Missing alternative text

What It Means
Image alternative text is not present.

Why It Matters
Each image must have alternative text. Without alternative text, the content of an image will not be available to screen reader users or when the image is unavailable.

What To Do
Add an alt attribute to the image or, for svg elements, provide a <title> or ARIA label. The value should accurately and succinctly present the content and function of the image. If the content of the image is conveyed in the context or surroundings of the image, or if the image does not convey content or have a function, it should be given empty/null alternative text (alt="").

The Algorithm... in English
An image does not have an alt attribute.

Guidelines
• [1.1.1 Non-text Content \(Level A\)](#)
[Icon index](#)

Contrast Errors
Very low contrast

What It Means
Very low contrast between text and background colors.

Why It Matters
Adequate contrast of text is necessary for all users, especially users with low vision.

What To Do
Increase the contrast between the foreground (text) color and the background color. Large text (larger than 18 point or 14 point bold) does not require as much contrast as smaller text.

The Algorithm... in English
Text is present that has a contrast ratio less than 4.5:1, or large text (larger than 18 point or 14 point bold) has a contrast ratio less than 3:1. WCAG requires that page elements have both foreground AND background colors defined (or inherited) that provide sufficient contrast. When text is presented over a background image, the text must have a background color defined (typically in CSS) that provides adequate text contrast when the background image is disabled or unavailable. WAVE does not identify contrast issues in text with CSS transparency, gradients, or filters. WCAG Level AAA requires a contrast ratio of at least 7:1 for normal text and 4.5:1 for large text.

Guidelines
• [1.4.3 Contrast \(Minimum\) \(Level AA\)](#)

Alerts
Skipped heading level

What It Means
A heading level is skipped.

Why It Matters
Headings provide document structure and facilitate keyboard navigation by users of assistive technology. These users may be confused or experience difficulty navigating when heading levels are skipped.

What To Do
Restructure the document headings to ensure that heading levels are not skipped.

The Algorithm... in English
A heading level is skipped (e.g., an `<h1>` is followed by an `<h3>`, with no intermediate `<h2>`). Note that an `<h1>` is not required to be the first heading within the document.

Guidelines

- [1.3.1 Info and Relationships \(Level A\)](#)
- [2.4.1 Bypass Blocks \(Level A\)](#)
- [2.4.6 Headings and Labels \(Level AA\)](#)

Features
Null or empty alternative text

What It Means
Alternative text is null or empty (alt="").

Why It Matters
If an image does not convey content or if the content of the image is conveyed elsewhere (such as in a caption or nearby text), the image should have empty/null alternative text (alt="") to ensure that it is ignored by a screen reader and is hidden when images are disabled or unavailable.

What To Do
Ensure that the image does not convey content or that the content of the image is conveyed in nearby text (e.g., a caption).

The Algorithm... in English
An image has alt="".

Guidelines
• [1.1.1 Non-text Content \(Level A\)](#)
[Icon Index](#)

CONTRAST

 Background and foreground colors do not have a sufficient contrast ratio.

These are opportunities to improve the legibility of your content.

NAMES AND LABELS

 Links do not have a discernible name

These are opportunities to improve the semantics of the controls in your application. This may enhance the experience for users of assistive technology, like a screen reader.

ADDITIONAL ITEMS TO MANUALLY CHECK (10)

Show audits relevant to: All FCP LCP TBT CLS

INSIGHTS

▲ Forced reflow

▲ Network dependency tree

■ Use efficient cache lifetimes — Est savings of 1 KiB

■ Improve image delivery — Est savings of 243 KiB

○ Layout shift culprits

○ LCP breakdown

○ 3rd parties

These insights are also available in the Chrome DevTools Performance Panel - [record a trace](#) to view more detailed information.

DIAGNOSTICS

▲ Minimize main-thread work — 8.9 s

▲ Reduce JavaScript execution time — 5.2 s

■ Reduce unused CSS — Est savings of 40 KiB

■ Reduce unused JavaScript — Est savings of 3,671 KiB

■ Avoid enormous network payloads — Total size was 2,957 KiB

○ Avoid long main-thread tasks — 20 long tasks found

○ User Timing marks and measures — 3 user timings

○ Avoid non-composited animations — 11 animated elements found

Accessibility

These checks highlight opportunities to [improve the accessibility of your web app](#). Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so [manual testing](#) is also encouraged.

BEST PRACTICES

▲ [user-scalable="no"] is used in the <meta name="viewport"> element or the [maximum-scale] attribute is less than 5.

▲ Document does not have a main landmark.

○ Identical links have the same purpose.

These items highlight common accessibility best practices.

CONTRAST

▲ Background and foreground colors do not have a sufficient contrast ratio.

These are opportunities to improve the legibility of your content.

Structured data is valid

Run the [Structured Data Testing Tool](#) to validate structured data. [Learn more about Structured Data.](#) (Unscored)

Run these additional validators on your site to check additional SEO best practices.

PASSED AUDITS (9)

Hide

Page isn't blocked from indexing

Search engines are unable to include your pages in search results if they don't have permission to crawl them. [Learn more about crawler directives.](#)

Document has a <title> element

The title gives screen reader users an overview of the page, and search engine users rely on it heavily to determine if a page is relevant to their search. [Learn more about document titles.](#)

Document has a meta description

Meta descriptions may be included in search results to concisely summarize page content. [Learn more about the meta description.](#)

Page has successful HTTP status code

Pages with unsuccessful HTTP status codes may not be indexed properly. [Learn more about HTTP status codes.](#)

Links have descriptive text

Descriptive link text helps search engines understand your content. [Learn how to make links more accessible.](#)

robots.txt is valid

If your robots.txt file is malformed, crawlers may not be able to understand how you want your website to be crawled or indexed. [Learn more about robots.txt.](#)

Image elements have [alt] attributes

Informative elements should aim for short, descriptive alternate text. Decorative elements can be ignored with an empty alt attribute. [Learn more about the alt attribute.](#)

Document has a valid hreflang

hreflang links tell search engines what version of a page they should list in search results for a given language or region. [Learn more about hreflang.](#)

Document has a valid rel=canonical

Canonical links suggest which URL to show in search results. [Learn more about canonical links.](#)
