

Flipkart Accessibility Audit Report

Accessibility • Performance • SEO • Usability

EXECUTIVE SUMMARY

The audit reviewed the Flipkart public website using WAVE, Lighthouse/PageSpeed Insights, and manual keyboard-navigation checks. The results show strong best-practice and SEO scores, while accessibility and performance contain areas that can be improved.

LIGHTHOUSE SNAPSHOT

62	81	96	92
Performance	Accessibility	Best Practices	SEO

Metric	Result
FCP	1.8 s
LCP	2.7 s
TBT	2,130 ms
CLS	0.002
Speed Index	6.0 s

ACCESSIBILITY ISSUES

01	Alternative Text High
WCAG	WCAG 1.1.1
Evidence	Review WAVE-reported image alternative-text issues.
Fix	Add meaningful alt text to informative images and appropriate empty alt text to decorative images.

02	Color Contrast High
WCAG	WCAG 1.4.3
Evidence	WAVE/Lighthouse identified insufficient contrast in some content.
Fix	Adjust foreground/background colors to meet WCAG contrast requirements.

03	Link Names High
WCAG	WCAG 2.4.4
Evidence	Some links do not have a clear discernible name.
Fix	Use descriptive link text or an accessible label that explains the destination/purpose.

04	Heading Structure Medium
WCAG	WCAG 1.3.1
Evidence	Heading organization needs review for logical structure.
Fix	Use a clear heading hierarchy and avoid skipping levels without a structural reason.
05	Main Landmark Medium
WCAG	WCAG 1.3.1
Evidence	Lighthouse reported that the document does not have a main landmark.
Fix	Wrap the primary page content in a semantic landmark.

PERFORMANCE PRIORITIES

Lighthouse highlighted high total blocking time, long main-thread tasks, JavaScript execution, unused JavaScript, unused CSS, large network payloads, and image-delivery opportunities. These areas should be prioritized during performance optimization.

MANUAL KEYBOARD CHECK

The keyboard test should confirm visible focus, logical Tab order, Shift+Tab navigation, and keyboard activation of links and controls. Evidence screenshots should be stored with the project.

CONCLUSION

The findings provide a practical backlog for improving accessibility, performance, and usability. After fixes are implemented, WAVE and Lighthouse should be rerun to verify progress.
