

Flipkart Accessibility Audit

Project Overview & Repository Guide

PROJECT OVERVIEW

This project documents an accessibility, performance, SEO, and usability audit of the Flipkart website.

Goal: Identify common issues and suggest practical improvements for a better experience for all users.

WEBSITE AUDITED

Website	Flipkart
URL	https://www.flipkart.com/
Focus	Accessibility • Performance • Usability • SEO

TOOLS USED

- WAVE Accessibility Evaluation Tool
- Google Lighthouse
- Keyboard-only navigation
- GitHub

LIGHTHOUSE SNAPSHOT

62	81	96	92
Performance	Accessibility	Best Practices	SEO

MAIN FINDINGS

- Some images and visual elements need better alternative text.
- Some text and interface elements have insufficient color contrast.
- Some links do not have clear or useful accessible names.
- The heading structure can be improved.
- Appropriate main landmarks can improve page structure.

RECOMMENDED IMPROVEMENTS

- Provide meaningful alternative text.
- Improve color contrast.
- Give links and buttons clear accessible names.
- Use headings in a logical order.

- Add appropriate semantic landmarks.
- Reduce unnecessary JavaScript and improve loading performance.
- Test important flows using keyboard navigation and assistive technologies.

```

PROJECT OUTCOME

This repository provides a clear record of the audit process, key findings, and recommended improvements. It can later be extended with screenshots, test cases, accessibility fixes, and automated testing.
